

Dealing with symptoms of illness and colds in children and adolescents in day-care facilities, day-care centers and schools

-Information for parents and staff-

When must your child stay at home?

If at least one of the following symptoms is present (all symptoms must be acute / symptoms of a chronic disease are not relevant):

Fever from 38.0°C
Please ensure correct temperature measurement

Dry cough
(not caused by chronic diseases, such as asthma)

Disturbance of the sense of taste or smell
(not as an accompanying symptom of a cold)

A cold without further signs of illness, just like a slight or occasional cough or neck scratching, is **not a reason for exclusion**.

yes

Does your child need a doctor?

If so, please contact your family doctor by telephone.

yes

The doctor decides on a test for corona virus.

Please note that your child is not allowed to visit the facility between the time the test is taken and the result is reported.

no

no

yes

Your child stays at home

negativ

The test result is...

positiv

Your child is fever-free for at least 1 day and in good general condition

For parents for orientation: The way my child was yesterday, he or she could have gone to a day care center, day care center or school, so today he or she can go again.

Healthy siblings who are not subject to quarantine regulations by the health authorities may attend the day care center, day care center or school without restrictions.

At least 48 hours without symptoms and at the earliest 10 days after onset of symptoms

please always observe the Specifications of the public health department.

yes

yes

The child is allowed to visit the respective facilities again.

A medical certificate is not required.
